The calving ease bulls were primarily raised by first calf heifers which were on a sub-optimal range not nearly meeting energy requirements. Their calves reflected this in the 205 weights so they were indexed separately for the 205 index. In September, the bulls were put on a 110 day feed trial being weighed every 30 days. The calving ease bulls showed compensatory gains during this period and were indexed against the entire group. The bigger bulls were slowing down in growth as they were approaching 1500 lbs. Pictures show some of the bulls as of January 1st and also a few photos as calves on range.

Please visit the web site at pacificcattle.com to see all the bulls pictured and give us a call at 509-539-6850 if you have any questions. Bulls are sold by private treaty starting February 1st. We're excited with this year's offering of bulls being the best set to date. Nutritionally we have changed from past years to put on more muscle and keep them leaner. Also the bulls have remained on pasture through December, coming in for feed thereby getting more exercise and improving hoof quality. Come see the bulls just 4 miles off 395 East of Eltopia, WA.
